                                                                                                                                                                      consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 168497;

* NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* B9790 89889: contig of 8978 bp in length 89790 86759: contig of 6870 bp in length 86760 96859: gap of unknown length 86760 96859: gap of unknown length 96760 96859: contig of 77093 bp in length.

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contigl has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

Specifically, the indicated order and orientation of each sequence contign has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigns have been trimmed away, and each base is associated with a Phrap-derived quality score.

Sequencing vector: plasmid; n/s; 100% of reads Semblary: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap, version 0.990319

Consensus quality: 17182 bases at least Q30

Consensus quality: 171845 bases at least Q20

It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                            The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in C20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 96915: contig of $9615 bp in length

* 97016 154440: contig of 57425 bp in length.

The sequence data in this record represents an 'enhanced' version of a phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been releved to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                * NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* I 190441: contig of 190441 bp in length.

                                                                                                                                                                                                                                                                                     The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence control has been established using one or more of the following: read-pair data from individual subclones, overlags with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been triumed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319 consensus quality: 154307 bases at least Q40 consensus quality: 154367 bases at least Q20 consensus quality: 154358 bases at least Q20 insert size: 121000; agarose-fp insert size: 124377; sum-of-contigs Quality coverage: 12.74x in Q20 bases; sum-of-contigs Quality coverage: 9,99x in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence consign have been trimmed away, and each base is associated with a Phrap-derived quality score.

It currently consists of 6 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

** NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

**This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

**This sequence will be replaced to the pieces of the finished sequence as soon as it is available and the accession number will be preserved.

**To all sequence as soon as it is available and the accession number will be preserved.

**To all sequence as soon as it is available and the accession number will be preserved.

**To all sequence as soon as it is available and the accession number of 1338 bp in length and 14318 14317; contig of 13398 bp in length 14318 16327; gap of unknown length 16398 16327; contig of 4338 bp in length 16338 16326; contig of 4338 bp in length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 16348; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548; gap of unknown length 163548
order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence esequence assembly is based on at least 8% average coverage in 020 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a phrap-derived quality score.

Sequencing vector: plasmid; n/a; 100% of reads chemistry: bye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319

                                                                                                     Gene diagnosis of type 2 mutation for bovine claudin-16 deficiency, comprises checking for mutation in 1-161 position in claudin-16 sequence.
                                                                                                                                                                                      The invention describes gene diagnosis of type 2 mutation for bovine claudin-16 deficiency. The method involves (a) getting a bovine nucleic acid sample; (b) subjecting the sample to a gene amplification reaction to give a nucleic acid fragment; (c) checking the presence of mutation it he nucleic acid fragment of step (b). The method is used for gene diagnosis of type 2 mutation for bovine claudin-16 deficiency. This sequence represents a polymucleotide from the bovine Claudin-16 deficiency associated gene in which the type 2 mutation occurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAAGATGGACACTCTATACAGTCAGCAAAAACAACAGGAGCTGAATGTGGCTCAG

determinants which are made by alpha(1,3) galactosyltransferase (GT). The ovine tissue is useful for treatment of human body by surgery or therapy and in xenotransplantation, by transplanting the ovine tissue into a mammal having circulating and alpha(1,3) GT determinants. Polymucleotide constructs of the invention are useful for inactivating solymucleotide in an ovine cell. Alpha (1,3) GT sequences are useful for drug soreening and for the production of GAL containing synthetic oligosaccharides. Sequences of the invention are also useful in gene therapy. The present sequence is bovine gamma globin gene

The invention relates to a novel transgenic bovine/cervid comprising a transgene encoding a mutant prion protein (PrP) polypeptide, in which a substitution has been made at position 171 of the sequence, which renders the bovine/cervid resistant to bovine spongiform encephalopathy (BSB) and transmissible spongiform encephalopathy (TSE) disease, respectively. The transgene of the invention has neuroprotective activity. The method is useful for producing a transgenic bovine or cervid resistant to BSE and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1935
                                                                                                                                          The invention relates to a bovine myostatin promoter sequence. The myostatin promoter polynucleotide sequences can be used in diagnostic sets for muscle cell disorders, and as a genetic marker for the selection, in particular, of cattle and sheep breeds that express low levels of myostatin, and so have increased muscle mass. The promoter can also be used for the transcriptional control of a heterologous gene of interest, e.g. myogenic regulatory factors, myostatin and myostatin receptor, oncogenes, genes that regulate muscle differentiation and growth, the muscular dystrophy gene, and any other genes expressed in muscle. The present sequence represents the nucleotide sequence of bovine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTTCTATGCAGAG-ACATCATGAGAAACGCTGGGCTGGAAGAAGCACAAGCTGGAATCAA 1979
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a bovine myostatin promoter sequence. The myostatin promoter polynucleotide sequences can be used in diagnostic tests for muscle cell disorders, and as a genetic marker for the selection, in particular, of cattle and sheep breeds that express low levels of myostatin, and so have increased muscle mass. The promoter can also be used for the transcriptional control of a heterologous gene of interest, e.g. myogenic regulatory factors, myostatin and myostatin receptor, oncogenes, genes that regulate muscle differentiation and growth, the muscular dystrophy gene, and any other genes expressed in muscle. The present sequence represents the nucleotide sequence of bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 promoter sequences of the myostatin gene used to diagnose muscle disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cregiriccalariagealalagergriccicalagecreraritricresecercritraria

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1301
                                                                                                                                                                                                                                                                                               The invention relates to a novel transgenic bovine/cervid comprising a transgene encoding a mutant prion protein (PrP) polygeptide, in which a substitution has been ande at position 171 of the sequence, which renders the bovine/cervid resistant to bovine spongiform encephalopathy (BSE) and transgene of the invention has neuroprotective activity. The method is useful for producing a transgenic bovine or cervid resistant to BSE and cattle exhibiting resistance to bovine spongiform encephalopathy. The sequence represents the bovine prion gene is useful for producing transgenic cattle exhibiting resistance to bovine spongiform encephalopathy. The sequence represents the transgene encoding the mutant bovine prp
                                                                                                                                                                                                  New transgenic bovine and cervid useful for producing animals which are resistant to bovine spongiform encephalopathy and transmissible spongiform encephalopathy disease, comprise a transgene encoding a mutant PrP polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1573 AATGCAGAGTTCCAAAGAACTTCCAGTTGTTCAAGCTGGTTTTAGAAAAGTCAGAAAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The tracheal antimicrobial peptide (TAP) gene is expressed primarily in analysis indicates that TAP is expressed along the bovine airway. RNA conducting airway. It includes a consensus sequence for an NFKB recognition site 181 bases upstream from the transriptional start site. When assayed in vitro several different strains of microbes, including some which are respiratory pathogens, a mammalian TAP (see AAR66204 FT) of bovine origin showed similar inhibitory activity to that of synthetic marainin. PAP (see AAR66204 FT) of bovine origin showed similar inhibitory activity to that of synthetic coli and K. pneumonia, significant antimicrobial activity was also seen when applied to C. albicans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes gene diagnosis of type 2 mutation for bovine claudin-16 deficiency. The method involves (a) getting a bovine nucleic acid sample; (b) subjecting the sample to a gene amplification reaction to give a nucleic acid fragment; (c) checking the presence of mutation in the nucleic acid fragment of step (b). The method is used for gene flagnosis of type 2 mutation for bovine claudin-16 deficiency. This sequence represents a polymuclecide from the bovine claudin-16 deficiency associated gene in which the type 2 mutation occurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1956 GGAAGAAGCACAAGCTGGAATCAAGATTGCCGGGAGAAATAGCAATAACCTCAGATATGC 2015
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gene diagnosis of type 2 mutation for bovine claudin-16 deficiency, comprises checking for mutation in 1-161 position in claudin-16 sequence.

The invention relates to the production of platelet-derived growth factor (PDGF) comprising a transgenic mammal whose sonatic and garm cells comprise a nucleic acid sequence (1) encoding PDGF, operably linked to a promoter directing expression into mammalian gland epithelial cells, and obtaining the milk from the transgenic mammal where at least 30% of the PDGF in the milk from the transgenic mammal where at least 30% of the ransgenic mammal capable of expressing an active PDGF molecule in milk. Pharmaceutical compositions can be obtained from this milk and can be transgenic pode to enhance the wound healing process; in particular diabetic foot ulcers, decubitus ulcers and venous stasis ulcers.

Transgenic PDGF (11) can also be used in the treatment of periodontal regeneration, stimulation of bone formation, ophthalmic diseases or healing of prosthetic vascular grafts. (11) can also be used for nonmedical applications, e.g., as a supplement for cell culture media or as a component of diagnostic kits. The present sequence represents the platelet-derived growth factor expression cassette insert used in p80734 vector of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2572
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1982
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2513
